

## UNIQUICK® Feeder

Screw driving system  
UNIQUICK® with the new  
regulation and control  
module RSM

Optimised,  
process-reliable and  
energy-saving feeding

# BOLLHOFF

## Process-reliable, efficient and easy to operate!

These are the features of the new regulation and control module RSM for the UNIQUICK® Feeder. It offers a frequency and amplitude-controlled output of the sorted material for a level-independent output rate. Due to extended software functions, additional monitoring, actions and activities can be evaluated and controlled.

### What is new? **New in the UNIQUICK® product group:**

By means of the new info display, the system parameters can be set and represented more simple. This enables a repeatable system setting and a high availability. Moreover, customer-specific factory settings can be entered.

The new regulation and control module RSM realises all internal program sequences also for stationary use. An integration provided by the customer of sequence control is therefore not longer required.

The optimised separating and baffle area of the UNIQUICK® screw driving systems provides now a reduced wear at a better accessibility of the component.

### Advantages

- Easy handling of the system
- Extended software functions
- Reduced wear
- Higher process reliability
- Optimisation of air consumption
- Energy savings up to 20 %
